PROFESSIONAL SUMMARY

Master of Cybersecurity graduate targeting graduate SOC Analyst and AI Security Analyst roles, with hands-on experience in SIEM monitoring, alert triage, phishing investigation, and digital forensics from academic SOC simulations and the Telstra virtual experience program, plus current industry experience as an AI Engineer Intern building ML features in Python. Skilled with Splunk (SPL), Wireshark, Autopsy, and TheHive; familiar with MITRE ATT&CK, NIST CSF, the Essential Eight, and the OWASP Top 10 for LLM Applications. Currently completing the TryHackMe AI Security Level 1 (AI1) and SOC Analyst Level 1 (SAL1) certifications, both expected in 2026. Available full-time, including rotating shift rosters and on-site attendance.

TECHNICAL SKILLS

SIEM & Log Analysis: Splunk (SPL), log correlation, alert tuning, detection-rule review, dashboarding

Incident Response: Alert triage, prioritisation, escalation, IR playbooks, MITRE ATT&CK & Cyber Kill Chain mapping

AI & LLM Security: LLM threat modelling, prompt injection & jailbreak testing, data poisoning / RAG attack & defence, AI supply-chain risk, OWASP Top 10 for LLM Applications

Phishing & Email Security: Header / URL / attachment analysis, IOC extraction, sandbox detonation, mailbox sweeps

Digital Forensics: Wireshark, Autopsy, Windows Event Logs, TheHive, chain-of-custody documentation

Threat Intelligence & OSINT: VirusTotal, AbuseIPDB, URLScan, MITRE ATT&CK Navigator, IOC enrichment

Networking & Detection: TCP/IP, DNS, HTTP/S, Nmap, Scapy, packet analysis, IDS/IPS, OWASP Top 10

Cloud & Scripting: AWS, Azure, GCP fundamentals; Python, PowerShell, Bash for SOC automation & reporting

Frameworks & Standards: MITRE ATT&CK, NIST CSF, ISO/IEC 27001, Cyber Kill Chain, Essential Eight

Reporting & Communication: Client-ready technical reports, executive summaries, stakeholder briefings

PROFESSIONAL EXPERIENCE

AI Engineer Intern

Jun 2026 – Present

Unwind AI and Data Pty Ltd, Melbourne

- Building, testing, and iterating on AI/ML features in Python on real-world projects, collaborating with engineers and stakeholders across the team.
- Working hands-on with modern AI tooling and data workflows, developing first-hand understanding of how production AI systems are built – the foundation for assessing where they can be attacked and how to defend them.

Incident Handling & Digital Forensics – SOC Simulation

Jul – Nov 2025

La Trobe University – Coursework Project

- Triageed 15+ simulated alerts in TheHive across phishing, brute-force, and malware scenarios; enriched IOCs using VirusTotal and AbuseIPDB to reduce false positives during correlation.
- Conducted phishing analysis on email headers, embedded URLs, and attachments; extracted IOCs and drafted mailbox-sweep and URL-block playbook procedures suitable for SOC handover.
- Reconstructed incident timelines from Windows Event Logs and disk images (Autopsy, Wireshark) to establish attack sequence and scope, documenting to chain-of-custody standards.

Risk Management & Client Reporting – Managed Services Simulation

Mar – May 2025

La Trobe University – Coursework Project

- Authored weekly and monthly client-style reports summarising security posture, open risks, and remediation status for both technical and executive audiences.
- Aligned reporting framework with ISO/IEC 27001 controls, mapping risks to business impact and recommending pragmatic, cost-aware mitigations.

Cybersecurity Virtual Experience – Malware Attack Response

Mar 2025

Telstra Forge Program (Forge)

- Investigated a simulated malware incident end-to-end – pinpointing affected hosts, initial access vector, and root cause – and scoped containment actions within a structured SOC workflow.
- Mapped adversary tradecraft against the MITRE ATT&CK framework across 6+ techniques and authored a stakeholder-ready post-incident report with prioritised remediation actions.
- Recommended preventative controls and detection improvements across logging coverage, EDR rules, and user-awareness fixes, aligned with industry best practice.

PROJECTS

Real-Time Network Intrusion Detection System (NIDS)

May 2025

Python, Scapy, Nmap, scikit-learn

github.com/SowatRafi/Real-Time-Intrusion-Detection-System-with-Python

- Engineered a Python NIDS that captures live traffic, detects anomalous patterns, and raises real-time alerts – mirroring SIEM-style detection and triage workflows.
- Implemented signature-based and machine-learning (anomaly-based) detection using scikit-learn classifiers, with structured JSON logging ready for downstream SIEM ingestion.

Discover – Multi-Cloud Asset Discovery & Risk Assessment

Oct 2025

Python, Go, Azure SDK, AWS Boto3, Nmap

github.com/SowatRafi/Discover-Assest-Discovery

- Built a cross-platform tool to discover and risk-classify assets across AWS, Azure, and GCP, surfacing exposed services and misconfigurations.
- Generated automated CSV and JSON reports that consolidated findings into a single review-ready inventory, cutting manual asset-tracking effort across hybrid-cloud environments.

EDUCATION

Master of Cybersecurity

Mar 2024 – Nov 2025

La Trobe University, Melbourne, Australia

- Relevant coursework: Incident Response, Digital Forensics, Network Security, Risk Management, Security Operations, Cryptography, Cloud Security.

Bachelor of Computer Science & Engineering

Jan 2018 – Jun 2022

BRAC University, Dhaka, Bangladesh

RESEARCH & PUBLICATION

Lossless Segmentation of Brain Tumors from MRI Images Using 3D U-Net

Dec 2022

IEEE Asia-Pacific Conference on Computer Science and Data Engineering (CSDE 2022)

DOI: [10.1109/CSDE56538.2022.10089263](https://doi.org/10.1109/CSDE56538.2022.10089263) • [Source code on GitHub](#)

- Proposed a memory-efficient 3D U-Net for volumetric MRI brain-tumour segmentation, evaluated on the MICCAI BraTS 2020 benchmark with measurable IoU improvement over baseline approaches.
- Peer-reviewed and published at an IEEE international conference – demonstrating first-hand understanding of how deep-learning models are designed, trained, and evaluated, directly transferable to AI security threat modelling and model-risk assessment.

CERTIFICATIONS & CONTINUOUS LEARNING

- **TryHackMe – AI Security Level 1 (AI1) Certification** – *In progress, expected 2026*: prompt injection, data poisoning / RAG defence, AI supply-chain security
- **TryHackMe – SOC Analyst Level 1 (SAL1) Certification** – *In progress, expected 2026*: threat detection & triage, SIEM investigation, incident response
- **Google Cybersecurity Professional Certificate** – Coursera (*Completed*)
- **Cyber Incident Response & Digital Forensics** – Jason Dion, LinkedIn Learning (*Completed*)
